Reyna Gao

Python Backend Engineer | AI Integration | Full-Stack & Data Processing

From design and marketing foundations, now specializing in Python backend development and AI system integration. Leveraging FastAPI, ETL data pipelines, and GCP cloud deployment, with independent React frontend capability. Combining business logic with AI technologies (LLM, MCP) to build innovative system integration solutions. Cultivated strong cross-departmental communication and systematic problem-solving skills in high-pressure e-commerce environments.

TECH STACK

Backend & Database

Python | FastAPI | MySQL | RESTful API

AI & Data

LLM | MCP Integration | ELK Stack | ETL | YOLO

Frontend

React | JavaScript | HTML/CSS

DevOps & Tools

GCP / AWS | Docker | Git | ZeroTier | Linux

EDUCATION & TRAINING

MOL AI & Big Data Program

Python Core & Big Data Analytics

2025.12 — 2026.05

Chinese Culture University

Digital Media (Evening Program)

2025.09 — Expected 2027

✓ Evening classes, available for full-time daytime work

CERTIFICATIONS

AI & Data Analytics

- iPAS AI Application Planner (in progress)
- Tableau / BI Data Visualization

Product & UI/UX

- Google UX Design Certificate
- Figma / UI/UX Design & Prototyping
- Adobe PS / AI Certified

Industry Domain Knowledge

- WSET Level 2 Wine Certification
- KFDA Level 2 Floral Design (Korea)

PROJECTS & EXPERTISE

Backend Architecture & ETL

Proficient in Python and FastAPI framework, capable of designing RESTful APIs from scratch. Experienced in planning end-to-end ETL pipelines, having cleaned and structured 10,000+ raw data records into relational databases. Successfully containerized backend systems and databases for deployment on GCP cloud. Currently integrating ELK Stack (Elasticsearch, Logstash, Kibana) for data analytics, with hands-on experience in ZeroTier network tunneling.

#Python #FastAPI #MySQL #GCP #Docker #ELK

AI Applications & LLM / MCP

Focused on commercial deployment of Large Language Models (LLM), with the ability to integrate external data sources with AI models. Knowledgeable in MCP (Model Context Protocol), capable of developing middleware for deep AI-hardware/database interactions. Currently building interactive devices with Raspberry Pi 5, connecting YOLO computer vision models via MCP protocol for IoT hardware-software integration.

#LLM #MCP #Prompt Engineering #YOLO #Raspberry Pi

Full-Stack & Frontend (React)

Combining engineering and design perspectives, capable of independently transforming Figma hi-fi prototypes into high-performance web applications. Utilizing React and modern JavaScript (ES6+) with component-based development practices, ensuring seamless integration with backend APIs. Skilled in leveraging frontend technologies to reduce server-side rendering load, building highly interactive admin dashboards and data panels.

Technical Project Management

Experienced in leading technical teams for system development during training programs, serving as Project Manager (PM) and team lead. Skilled in coordinating frontend, backend, data engineering, and AI model workstreams. Responsible for requirements alignment, timeline management via WBS, and technical integration to ensure on-time project delivery. Capable of presenting project outcomes to stakeholders
